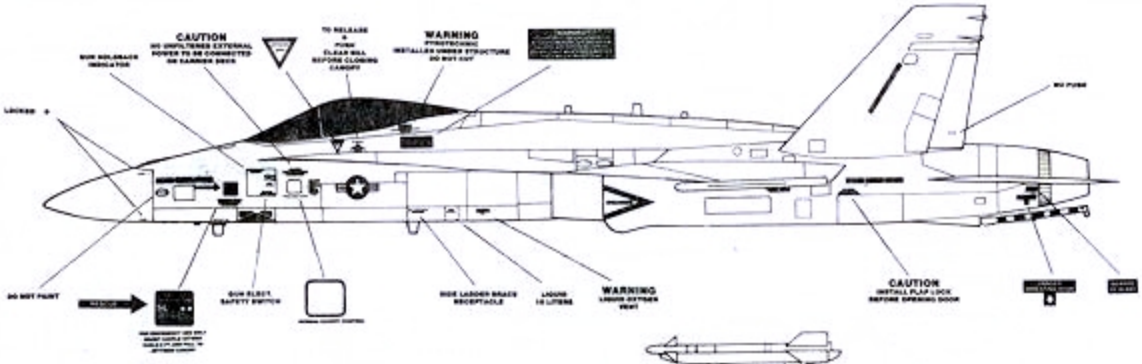
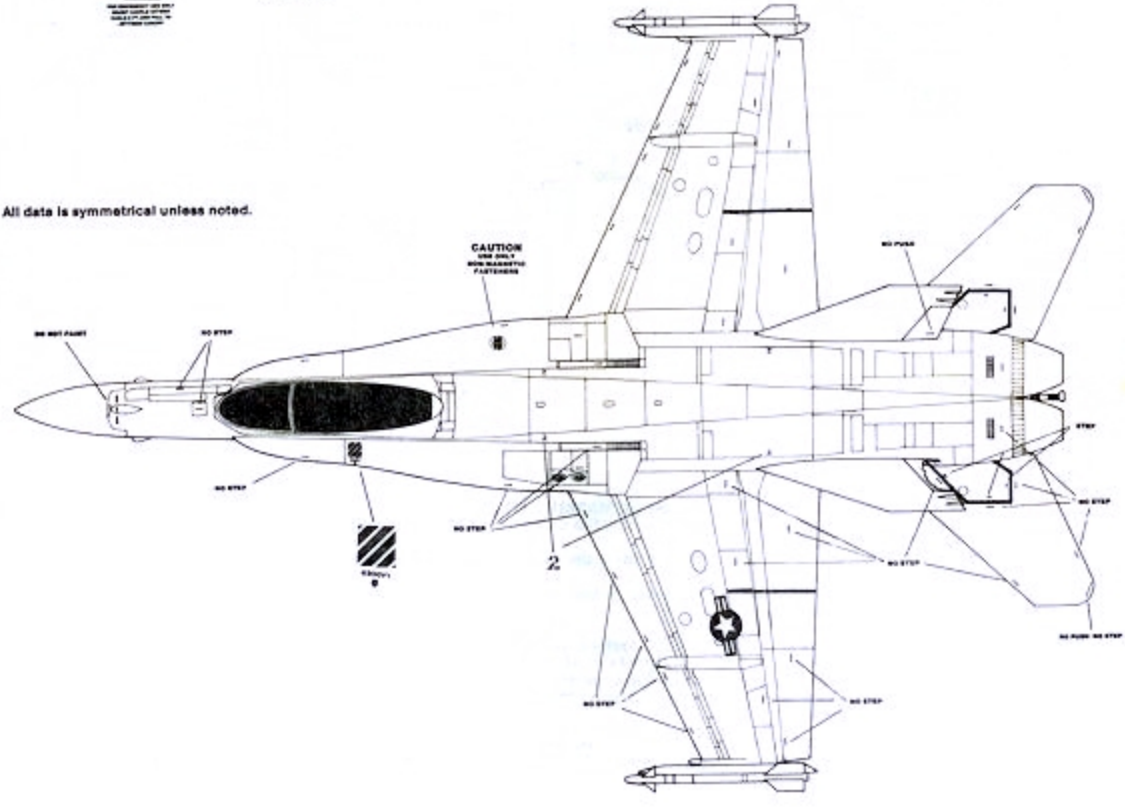
F-18 HORNET Data

This sheet contains complete data for Navy and Marine F-18s finished in the current Tactical scheme.

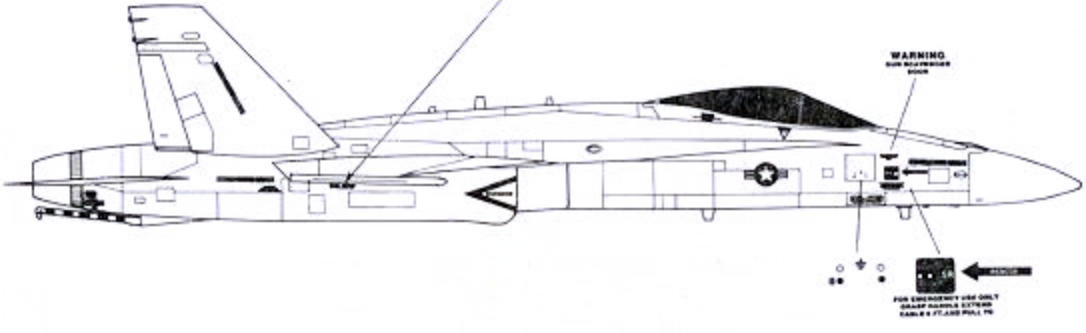
We have also included identification light strips in the correct color and size.

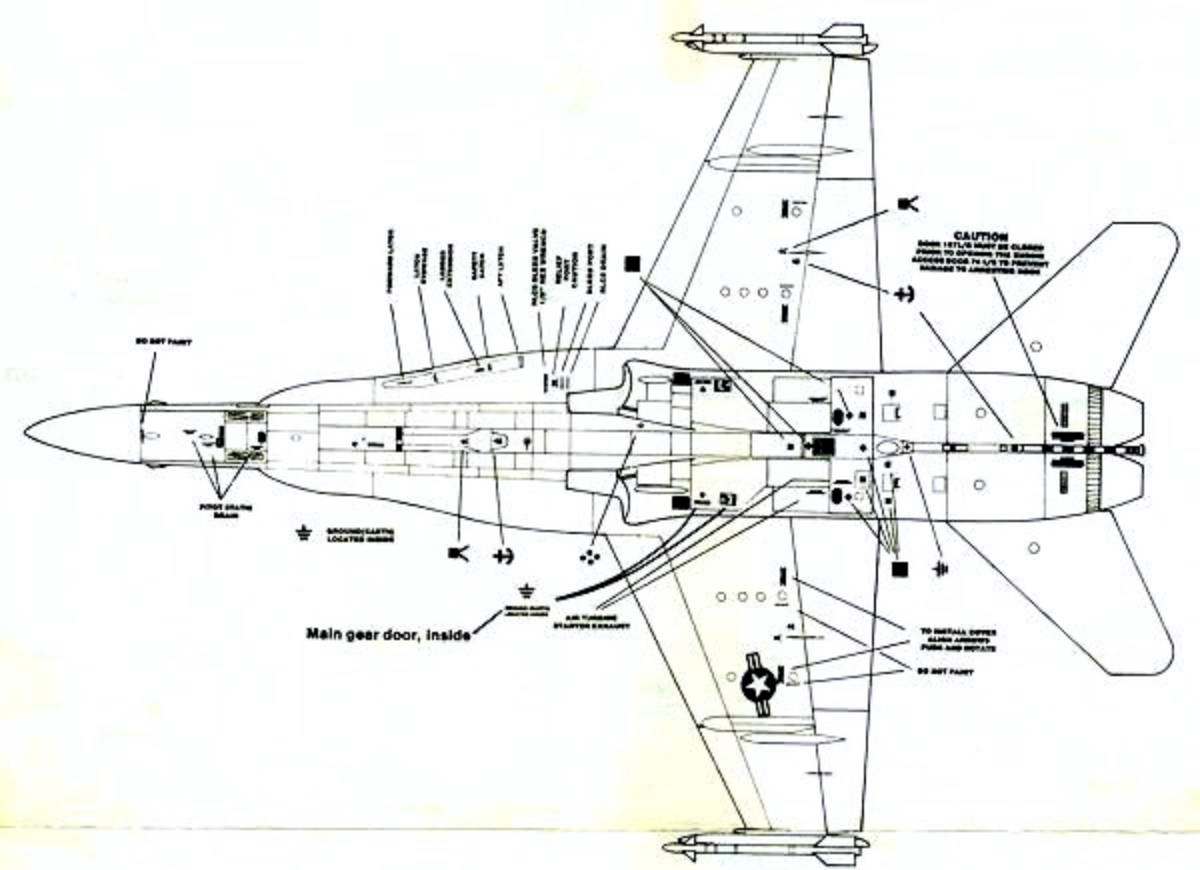


All data is symmetrical unless noted.



The two small identification light strips go on the wing tips under the sidewinder rails. Pieces will have to be made and added to the model for these.





TACTICAL PAINT SCHEME MARKING POLICY

1. If the background color is the darkest grey, use medium grey for the marking.
2. If the background color is the medium grey, use the darkest grey for the marking.
3. If the background color is the lightest grey, use medium grey for the marking.

This is the official USN marking policy for tactical color schemes. However, upon examination of actual aircraft, there are many deviations from this policy. We have based our decals on specific aircraft whenever possible. The stencil data on this aircraft is based on official drawings and examination of current aircraft.

Data lettering smaller than 3/4" is used on the full size aircraft. This lettering is too small for modeling purposes and is not practical to print.

Kits: Italeri
ESCI
Monogram
