## The MICAD SCALE DECAL SYSTEM

- Surface to be decalled must have a smooth, glossy, painted finish. (Do not decals to unpainted surfaces or they will not adhere.) To obtain this surface paint the model with glossy paints or spray MICRO GLOSS over matter-finish. IMPORTANT: Spray MICRO GLOSS over entire model or uneven patches will or when the flat finish is added later. Allow paint to dry thoroughly.
- For best results, surface to be decalled should be horizontal. A small vise is ul here, or a box can be made into a jig to allow the model to lay on its side
- Cut each decal subject from the sheet only as needed. <u>DO NOT</u> cut clear film from design. Using tweezers, dip decal completely into water then remove and decal adhesive to soften. About one minute should be sufficient.
- 4. While adhesive is softening use a soft, medium-size brush, a No. 7 red sable water color brush is ideal, and wet the area to be decalled with a few drops of MICRO SET (Blue label). This contains a wetting agent and helps eliminate tiny air bubbles.
- Holding the decal paper with tweezers, use the brush to slide the loosened decal the MICRO SET on the model. Now place a few drops of MICRO SOL (Red label) directly onto the decal and ition the decal exactly where it is to remain.
- 7. The MICRO SOL will soften the decal and allow it to conform exactly to the surface beneath. DURING THIS PROCESS THE DECAL WILL WRINKLE AND DISTORT. DO NOT TOUCH IT! THIS IS NATURAL AND AN IMPORTANT PART OF THE SYSTEM! As the decal dries it will flatten-out and lay down. When finally dry there will be no distortion and the decal will be permanently bonded to the paint beneath. Actual drying time will vary according to temperature and humidity.
- n decal is dry, examine it for any air bubbles. If any are found, is sharp needle and put a drop of MICRO SOL over the bubble and
- arefully examine the clear, film to be sure no silvering has appeared. If any is, puncture the film several times with a sharp needle and apply MICRO SOL, sering should vanish as the SOL touches it,
- After the decals have dried for several hours, carefully wash the decal adhesive the entire model.
- After the decals have dried for at least 12 hours, complete the model by spraying either MICRO FLAT or MICRO GLOSS, depending on the sheen desired on the
