## Notes on Aircraft

### 25+50

- This aircraft was painted for both the 50th anniversary of Memmingen airbase and the 25th anniversary of JaboG 34 (hence "25+50," which was painted on BOTH sides of the nose for the airshow. The actual number for this aircraft was '24+19,' and the jet ended up as ground instruction airframe in this same scheme with the correct (original) numbers on both sides of the nose. Some publications have *incorrectly* claimed there were two jets in this scheme, and others have *incorrectly* claimed "25+50" was painted on one side of the nose and "24+19" on the other. NOT!

### 104805

- This 421 "Red Indians" Sq CF-104 Starfighter was painted in squadron colors for the base festivities in 1983 celebrating the 30th year at CFB Baden-Söllingen CFB, Germany. Some publications have made reference to an unofficial nickname for this CF-104, "The Toothbrush." This colorful jet was joined by the black/white checkerboard CF-104 of 441 Sq, CAF (see our decal sheet CED48137).

## Bibliography

Original photos.

Flugzeug Lockheed F-104 Starfighter by Gerhard Lang.

F-104 Starfighter by Peter Foster. Warbirds Illustrated #4, Arms and Armour Press, 1987.

Various magazine clippings.

## Applying the Decals

You probably already know all this stuff, so feel free to use your regular process; however, if you're new to aftermarket decals, here goes:

- Generally, use the Microscale Finishing System. We don't recommend extremely strong decal solvents such as Solvaset.
- Your model must have a smooth, glossy surface, as decals won't adhere well to matte surfaces. Use gloss paints or your favorite clear gloss overspray over matte or semigloss paint.
- Cut each subject out without trimming off the slight excess film (this helps the decal film disappear when dry).
- Put the decal in warm water that has a drop or two of liquid dishwashing soap or photo-flo for 10 seconds.
- When the decal will slide off the backing paper without forcing it, apply it to the proper position on your model. Slide the backing paper out from underneath.
- Gently blot off excess water and smooth out bubbles under the decal surface. If you wish, carefully brush on a mild decal softener such as Micro-Sol.
- When all decals are completely dry, gently wash off all excess decal adhesive.
- Finally, overcoat your model with a good quality gloss coat, followed by your choice of matte or eggshell clear topcoat.
