All aircraft,  
both propeller blades

Wing handling  
locators  
Same position,  
top and bottom,  
upper and lower wings.  
All aircraft.

### References:

We recommend Fokker D VII Anthology 1 as a very good reading on these a/c. Page 64 describes the covering practices followed by the different manufacturers. Our profiles are illustrated with the 5 color lozenge fabric in mind, however the 4 color may have been used as well or in a combination of both.

**Recommended Kits:** Decals designed for DML Fokker D VII kit. Other kits may be used with some trimming.

*Our very special thanks to*

**Mr. Ray Rimell**

*for his invaluable contributions and  
unselfish advice! Any Remaining errors, if  
any, are ours!*

**Decaling:** Apply decals only to a glossy surface.

1. With a sharp scissors or knife, carefully cut item to be used, being careful of not cutting off the clear film around it or that belonging to an adjacent item.
2. Submerge in clean tap water for over 10 seconds and lay over an absorbent paper towel. Decal will slide freely in about 20 seconds. Do not leave decal on water bowl over ten seconds, or adhesive quality will suffer.
3. With a clean brush, apply a setting solution to the area where the decal will finally lay. (Micro, Super or Aero Set will do). With a clean pointed brush slide the decal on to the final area. Allow the setting solution to dry for about 3-5 minutes.
4. With another clean brush, apply a solvent solution over the decal (Micro, Super or Aero Sol will do). Do this if possible in one stroke since your decal will soften up and wrinkle immediately. This is an important step in the process, whatever you do **DO NOT TOUCH THE DECAL**, after this process until it is totally dry, preferably overnight.
5. When thoroughly dry, rinse your model with tap water and mild soap to wash of excess glue.
6. Finish your model with the desired final coat (gloss, flat, or semi-gloss).
