## Decal Placement Instructions

Leading edge of wings have a protective adhesive decal applied to the real aircraft. Model decal has been printed with an extra wide clear to allow the decal to wrap around the leading edge and stay down on the surface of the wing. Advanced modelers may want to reduce the size of this clearcoat.

Note: Painted surface must have a glossy finish for decals to properly set on the model. A decal softener setting liquid is strongly recommended. Especially for the larger decals that must conform to curved surfaces. Use spare Leading Edge logo decals to test the softener to be used.
