DCD7268 1/72nd scale
DCD4868 1/48th scale

Decals 1 and 9 have an extra border, which needs to be folded around the leading edge before placing decals 4 and 7.

For best results place the additional strips (=b) under the tail decals, covering the tail base cut below the rudder.

Produced from personal material and with the help of Johan Wolfs (the designer) and Jack Bosma

Stencilling for the second F-16 scheme can be obtained through DACO's 'Belgian F-16A/B Markings & Stencilling sheet' DCD7267 - DCD4867

Thanks...

THIS DECAL IS SUPPORTING:

I Fly For Charity

"I Fly For Charity" is an initiative of the Crew-Chiefs and pilots of the 10th Tac Wing at Kleine Brogel, Belgium. The "I Fly For Charity" pilot-puppets fly with different pilots and aircraft around the globe (and in space!) before being put up for auction together with their official logbooks and pictures. All proceeds of this initiative go entirely to the "Children's Cancer Foundation" in Belgium. Follow their adventures at <http://www.ifyforcharity.be>

Note about the different radome colours: All F-16s have radome with a special rubber-paint coating that easily absorbs dirt from the (polluted) air. Their colour varies from Medium Grey (when they are new) to Dark Grey (when they get old and 'dirty').

FB-24 has also a much browner front canopy part installed than FB-18. Check pictures at www.airliners.net (also for the 'right' mix of the radome's grey).

The use of the DACO's 'Medium' Decalsetting solution is highly recommended for best results. DACO has also released its own paints for the standard F-16 FS colours, which perfectly match our decals. The use of these paints is also highly recommended.

FS 36270 Medium Grey
 DACO Paint PA41

FS 36118 Dark Grey
 DACO Paint DCPA42

Mix between Medium Grey and Dark Grey

FS 36270 Medium Grey

* decal is enlarged slightly
 at the top of the rudder
 to fit Revells tail

** reinforcement plates between
 air refueling door and tail

** reinforcement plates between
 air refueling door and tail

** ventral fin decals are enlarged slightly at
 the lower trailing edge to fit most kits fins

The tail and ventral fin decals are designed based on the actual 1/1 dimensions.
 Compare your kit parts with these drawings and adjust where necessary,
 to make sure the decals will fit properly on your model.
