MiG-21 EXERCIZE MARKINGS

During the biggest post-war exercise air manouvers »Sloboda '71«, the fighter core was consisted of the 117. Regiment from Bihac equipped with fighter aircraft MiG-21PFM, and the reconnasance task was taken over the 352. Squadron equipped with MiG-21R. All the aircraft participating the manouvers were marked with a white lightning on the nose. Few years later, aircraft MiG -21M, MF and US from the 204. Regiment were included in the exercise air manouvers now named »Golija'76«. All the aircraft participating were marked with a light blue stripe on the nose and the wings. As it can be seen from the photos some MiG -21bis have white stripes which extend from the root of the tale to the vertical stabilisator.

USER'S MANUAL

The surface of the model kit should be smooth before applying the decal, which contributes to a better finish. carefully cut off Each decal with a sharp or a hobby knife. The removed decal dip in water from the backside no more than 20 sec. The decal should be carefully removed from the water and put on a tissue paper for approximately 30sec. Using a soft brush move the decal to the desired place on the model kit. Carefully remove the excess water and with the tissue paper press the decal to the surface of the model kit. After using the decal protect it with a gloss coat.
