

Gloster Meteor TT Mk.20

(EN)

In the immediate post-war era, the RAF night fighter squadrons were mostly equipped with late marks of the propeller-driven Mosquito fighter aeroplanes. As the international situation deteriorated, the Cold War broke up and the Eastern Bloc of communist countries led by the Soviet Union was formed, it became suddenly clear that the obsolescent Mossies would have to be replaced by some new, jet powered type. Gloster's designers had already been working on such a type capable of all-weather operations which was later to become the Javelin. The Soviet Union, however, brought the development of its own nuclear weapon to a successful end and the necessity of a replacement of the Wooden Wonders thus became even more urgent, leading to the development and production of the all-weather, two seat version of the Meteor jet fighters. As Gloster's designers were fully occupied, the development of the new version was transferred to Armstrong Whitworth and the first NF Meteor was in fact created by merging components of several already existing versions. The first prototype of the NF Mk.11 version first took to the air on 31 May 1950, carrying an AI Mk.10 radar in its nose, a crew of two and with its cannon armament moved from the front fuselage into its wings. The machine was powered by a pair of Derwent 8 engines. Further NF 11 machines began to leave the production line in November of the same year, and a total of 307 was finally built, followed by 14 airframes of tropicalised NF Mk.13 Meteor version, which differed, obviously, by having an air conditioning system installed in the cockpit. The next version was the NF 12 which was basically identical to the previous one except for its radar equipment and more powerful Derwent 9 turbojets. The nose section of this version carried a US-built APS-21 radar and the production gave a total of 100 NF12 airframes. The final version to reach the production status was the NF 14 which differed from the NF 12 just by having a more modern, frame-less, rear-sliding cockpit hood. A total of 100 NF 14s was also built.

The RAF operated all NF version of the Meteor and put them into the service with UK-based units as well as in occupied Germany and in the Middle East (mainly the NF Mk.13s in the latter location)

The NF Mk.14 machines also saw service within the Far East Air Force. The NF 11 airframes became very successful export commodity too, being introduced to air forces of Denmark, France and Belgium. Some of the ex-RAF NF13 Meteors were sold to the State of Israel while newly-built machines of the same mark were exported to Israel's enemies, Egypt and Syria. Two NF13s were bought by France as well as two NF14s. The NF12 version was introduced just to the RAF where it saw service along with the NF14s. The all-weather Meteor fighters remained in service until the 60s when they were replaced by more advanced types as was the Javelin, Hunter or even the Vautour. A couple of the NF 11s were converted to TT Mk.20 target tugs and 14 NF14 airframes were turned into a specialised navigator training NF (T) Mk.14 version.

Wingspan: 13.10 m, length: 15.22 m, max speed: 880 km/h, range 1,529 km, ceiling: 13,100 m, armament: 4× 20 mm cannon.

(CZ)

Po druhé světové válce byly noční stíhací squadrony RAF vybaveny posledními verzemi vrtulových stíhaček Mosquito. Vzhledem ke zhoršení mezinárodní situace se začátkem Studené války, po vzniku bloku socialistických zemí v čele se Sovětským svazem se ukázalo, že bude nutné nahradit zastarávající Mosquita novým proudovým typem. Gloster pracoval na nové stíhačce pro každé počasí, budoucím Javelinu. Když ale Sovětský svaz zavedl do výzbroje atomové zbraně, nutnost náhrady Mosquit se stala akutní. To vedlo k vývoji a výrobě dvoumístných stíhaček Meteorů pro každé počasí. Vzhledem k vytízení konstrukční kanceláře Glosteru byl vývoj v rámci koncernu Hawker přesunut do firmy Armstrong-Whitworth. Zde byly vlastně zkombinovány díly z jednotlivých variant Meteoru a nová varianta Meteoru byla na světě. První prototyp verze Meteor NF Mk.11 vzletl 31. května 1950. Dvoumístný stroj nesl v přídi radar AI Mk.10, kanónová výzbroj byla přesunuta do křídla. Stroj poháněly motory Derwent 8. Sériová výroba se rozeběhla v listopadu téhož roku a dala 307 kusů. Na ni navázalo 14 kusů tropikalizované verze Meteor NF Mk.13, lišící se instalací klimatizace do pilotních prostorů. Další verze v výrobě byla verze Meteor NF Mk.12, shodná s verzí NF Mk.11 až na radar v přídi a silnější motory Derwent 9. Do přídě této verze byl montován americký radar APS-21. Vyrobeno bylo 100 ks. Poslední sériovou variantou byl Meteor NF Mk.14. Odpovídal verzi NF Mk.12, ale dostal moderní odsuvný překryt kabiny bez rámování. Také této verze bylo vyrobeno 100 ks.

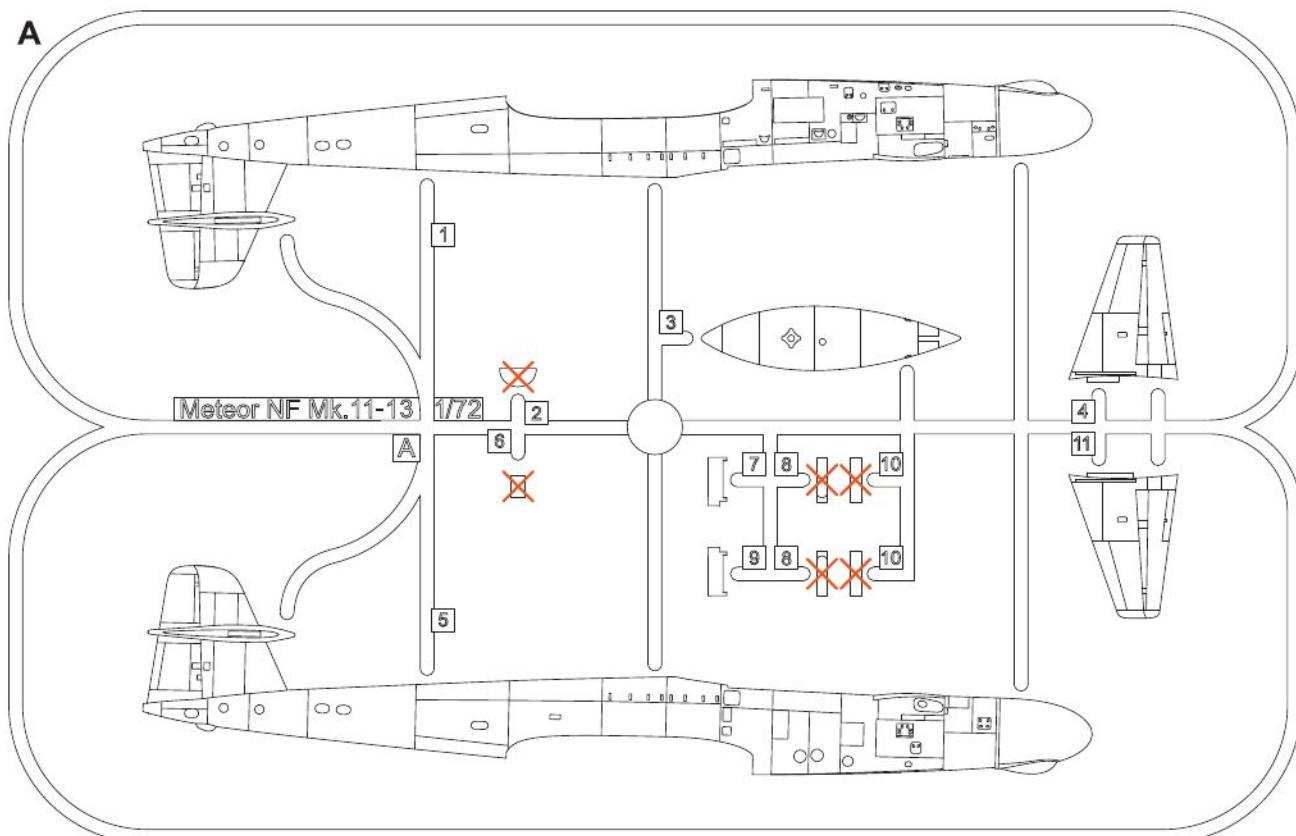

Všechny varianty stíhačích Meteorů pro každé počasí se dostaly do výzbroje RAF. Ta je nasadila na domácích základnách, v okupovaném Německu a na blízkém východě (tam hlavně verzi NF Mk.13). Verze NF Mk.14 byla operačně nasazena i v rámci Far East Air Force. Hlavně verze Meteor NF Mk.11 se stala úspěšným exportním artiklem. Do výzbroje ji zavídely letectva Dánska, Francie a Belgie. Verze NF Mk.13 byla prodána po vyřazení z RAF státu Izrael. Nově vyrobené NF Mk.13 byly prodány protivníkům Izraele, Egyptu a Sýrii. Dva kusy koupila Francie, stejně jako dva kusy NF Mk.14. Verze NF Mk.12 zůstala pouze ve výzbroji RAF, kde sloužila společně s verzí NF Mk.14.

Meteory pro stíhání za každého počasí zůstaly ve výzbroji do šedesátých let, kdy byly nahrazeny modernějšími typy Javelin, Hunter či Vautour. Malá část Meteorů NF Mk.11 byla přestavěna na verzi pro tahání terčů TT Mk.20. Čtrnáct kusů verze NF Mk. 14 bylo přestavěno na cvičné letouny pro výcvik navigátorů NF (T) Mk.14.

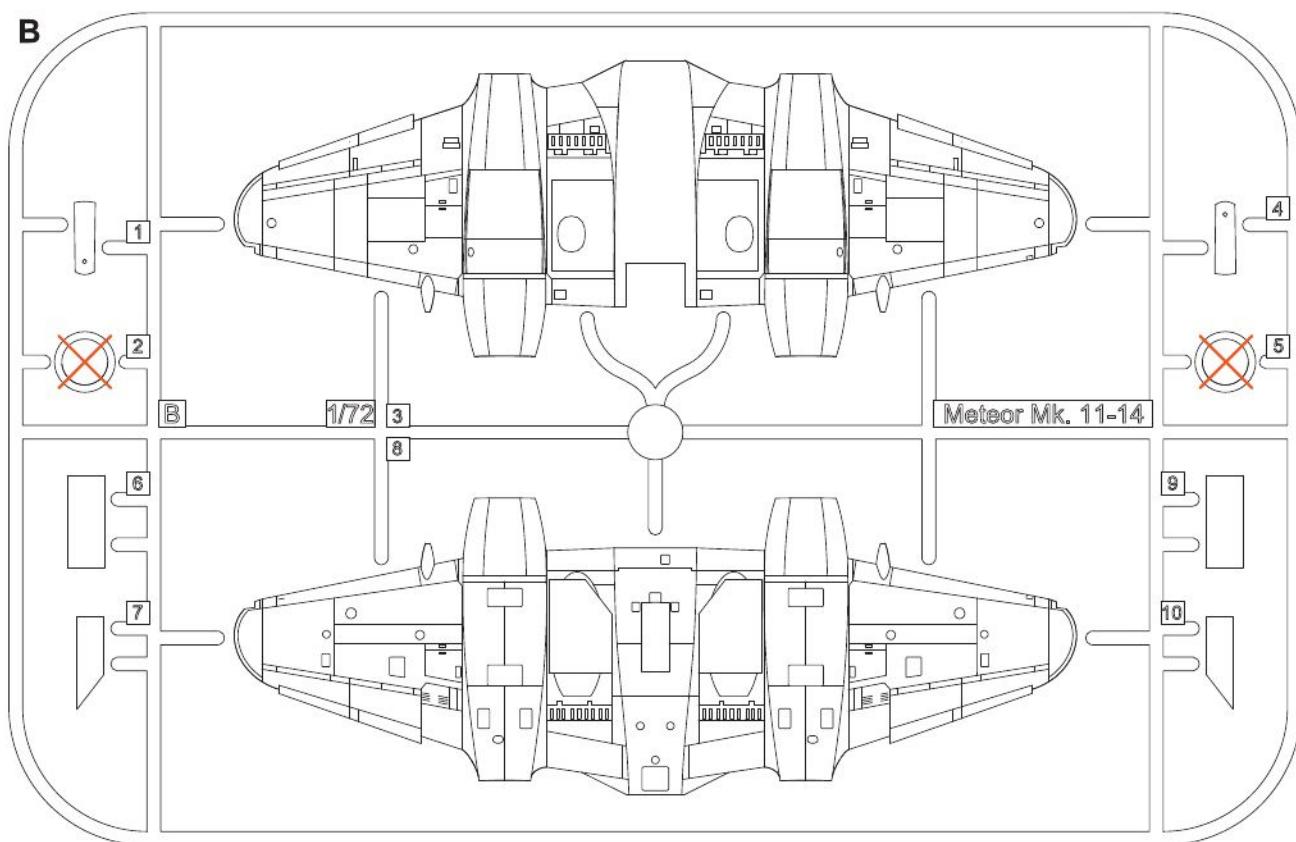

Rozpětí: 13,10 m, délka: 15,22 m, max. rychlosť: 880 km/h, dolet 1 529 km, dostup: 13 100 m, výzbroj: 4× kanón ráže 20 mm.

Ohnute 3D tisky narovnejte ponorěním do horké vody, srovnajte je a zchladte studenou vodou. K lepení použít kyanoakrylátové lepidlo! Kontaktní plochy doporučujeme před lepením odmaštít. Různé drátky a tyčinky nejsou připojeny.

Bent 3D printed parts: put them into hot water, straighten them and cool them in cold water. For best result use cyanoacrylate glue! Ungreasing contact areas is recommended before gluing. Wires and rods not included.

Gloster (A.W.) Meteor TT.20, 508 (ex WM391), Royal Danish Air Force, Karap base, 1959. With the ML G Type winch, Meteor no.508 was one of a half dozen Danish Mk.11 Meteors converted to the TT.20 version. Later transferred to Sweden where it was operated with registration SE-DCG.

Gloster (A.W.) Meteor TT.20, 508 (ex WM391), Dánské letectvo, základna Karap, 1959. Letoun byl vybaven vlekačím zařízením ML G type a byl jedním ze šesti dánských Meteorů Mk.11 přestavěných na verzi TT.20. Později byl prodán do Švédska, kde byl provozován jako SE-DCG.

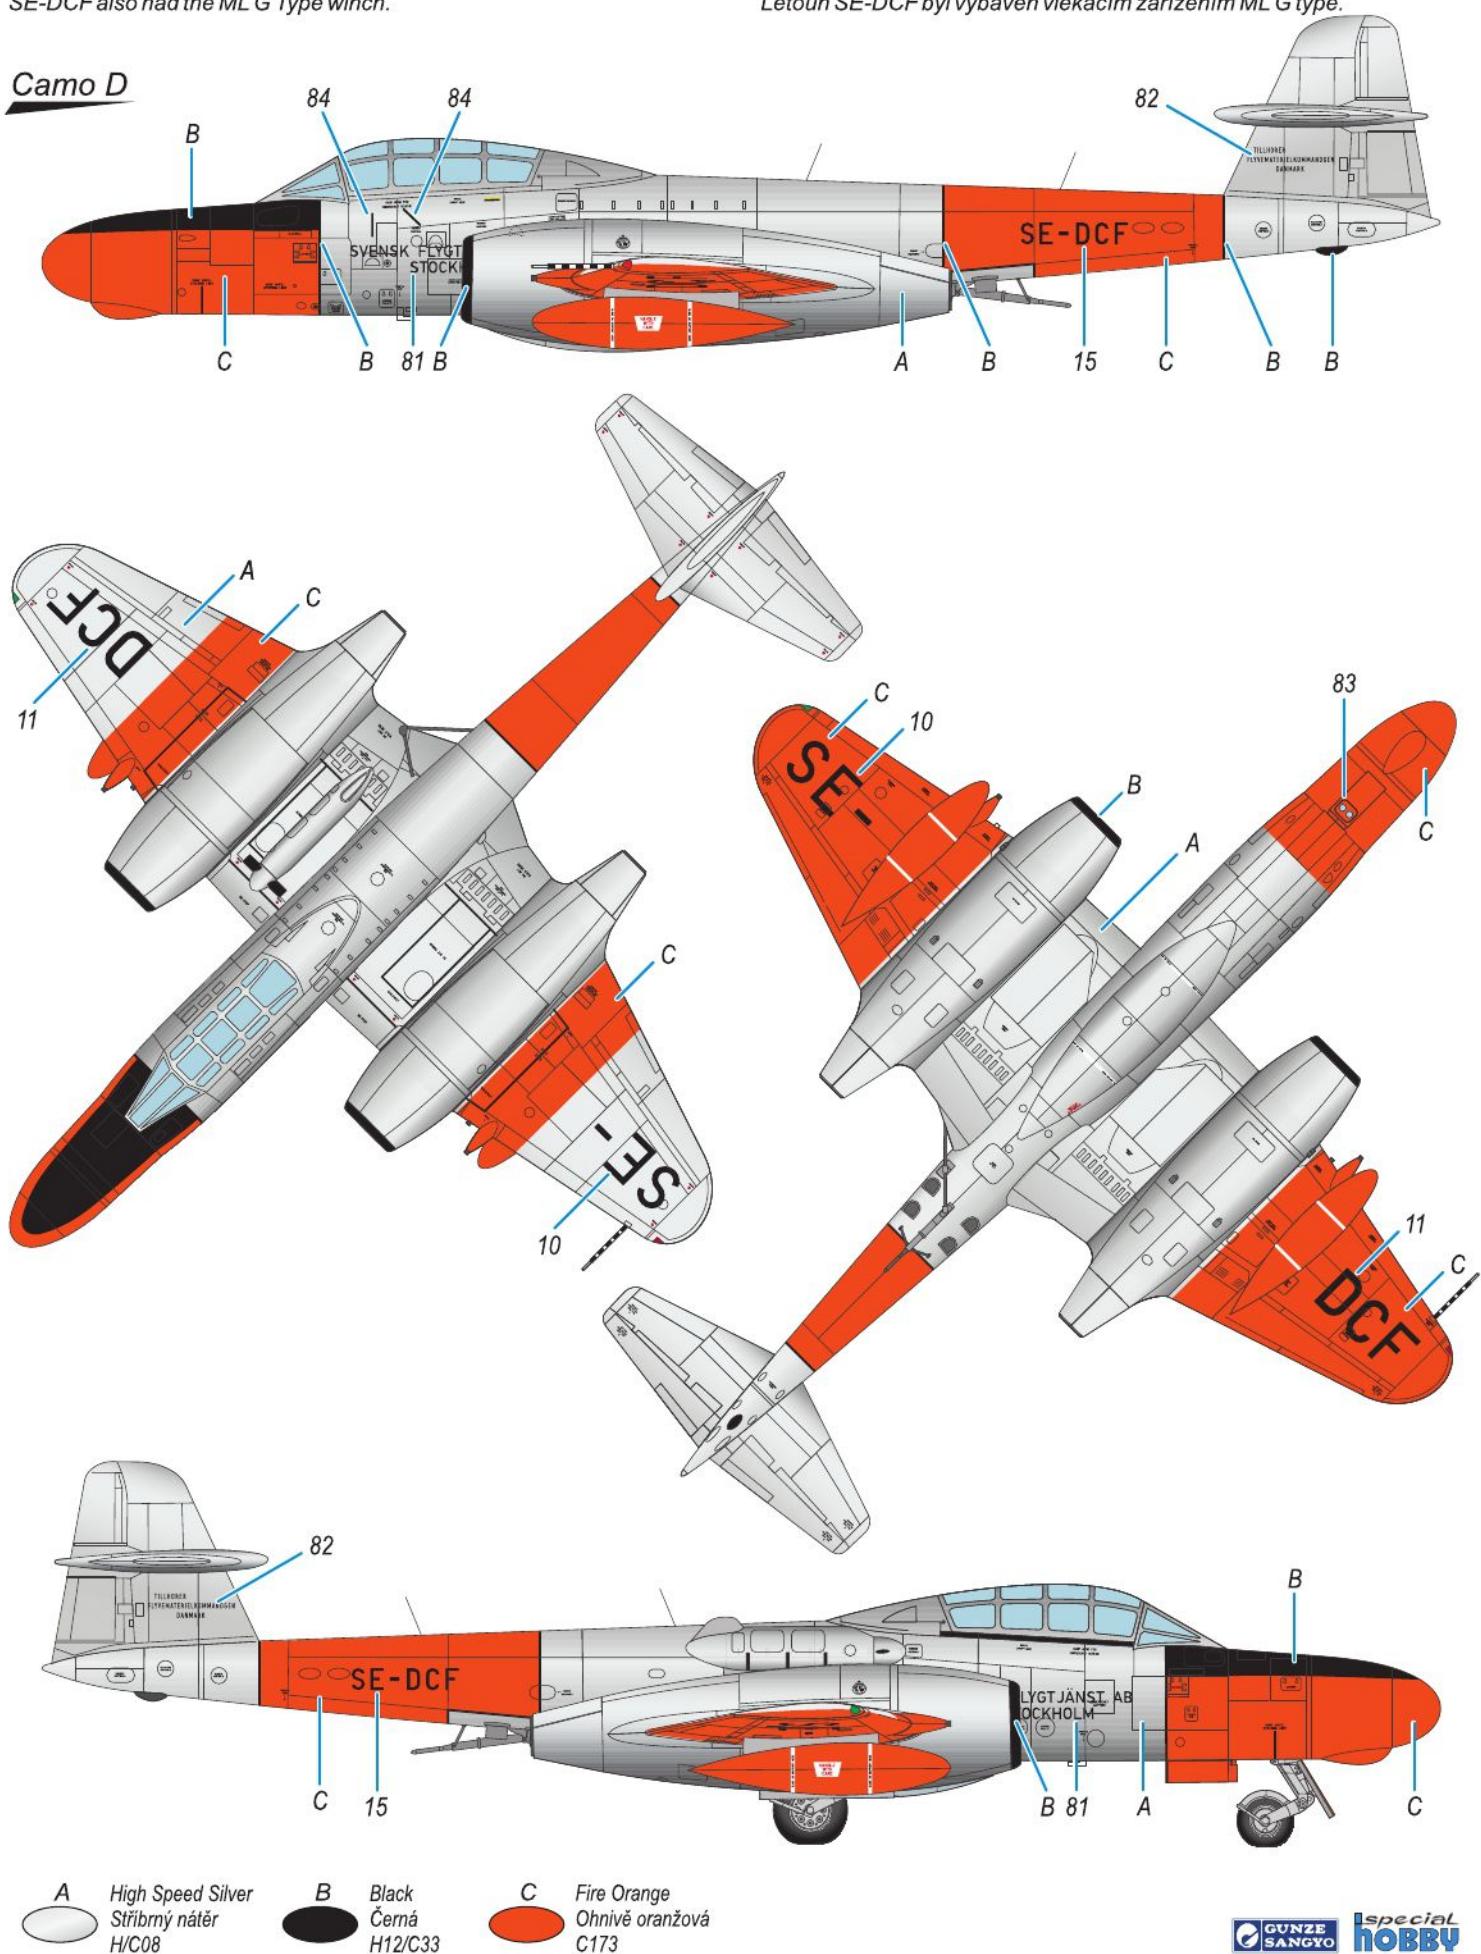

Camo C

Gloster (A.W.) Meteor TT.20, SE-DCF (ex WM395 / 512 of the RDAF), Svensk Flygtjänst AB, Malmö-Bulltofta airfield. Svensk Flygtjänst AB was a Swedish company providing target towing operations for the military. In 1962, it employed four of the six ex-Danish TT.20 airframes. SE-DCF also had the ML G Type winch.

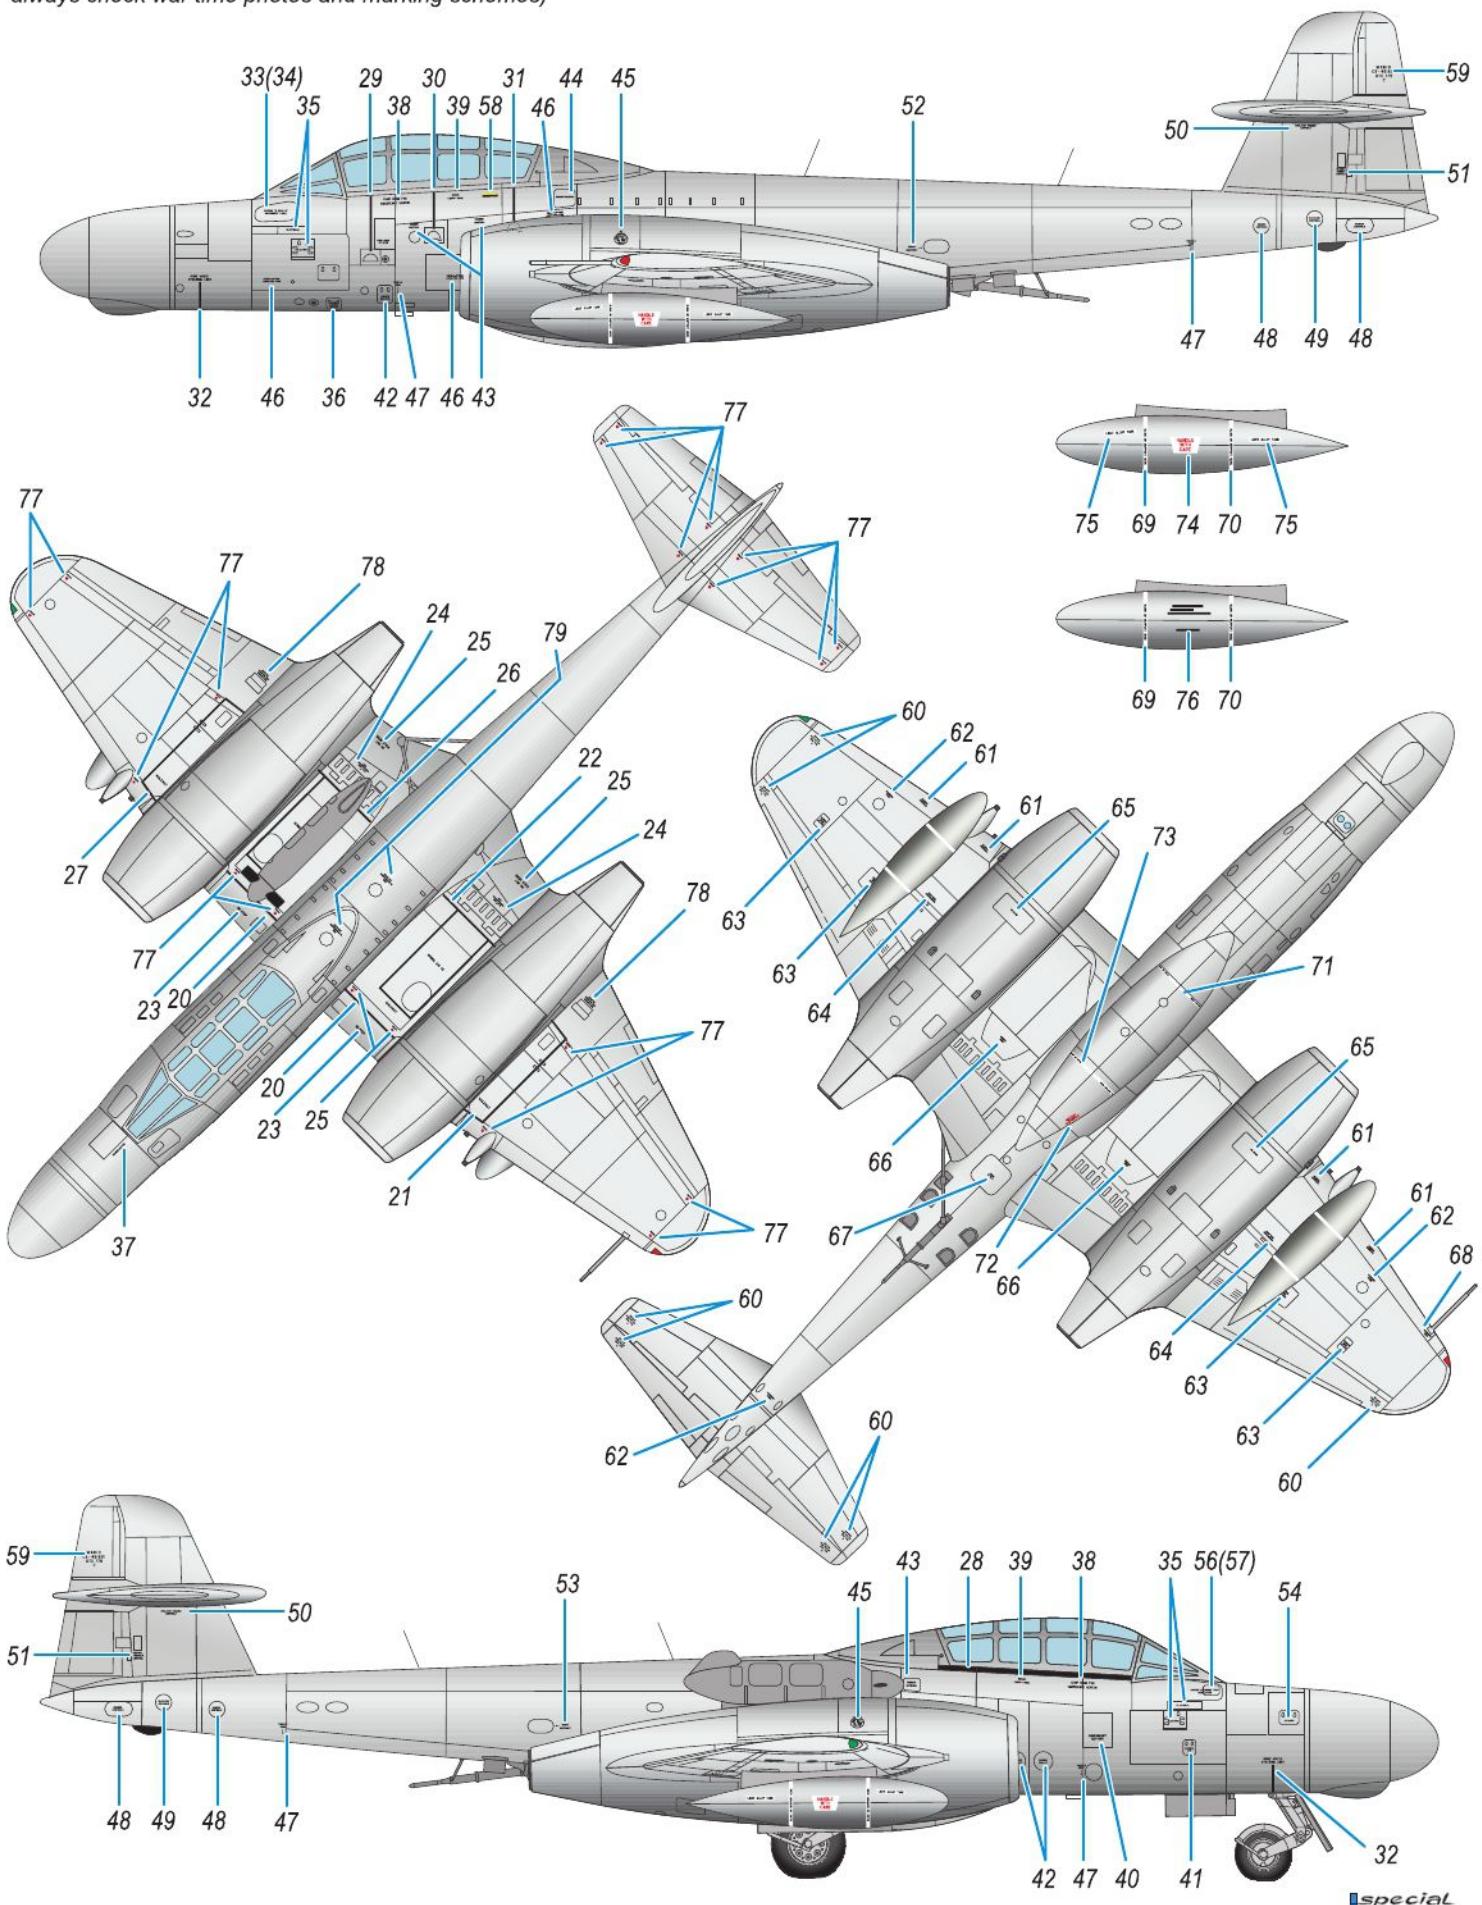

Gloster (A.W.) Meteor TT.20, SE-DCF (ex WM395 / 512 dánského letectva), Svensk Flygtjänst AB, letiště Malmö-Bulltofta. Švédská firma Svensk Flygtjänst AB, zajišťovala mimo jiné vlekání terčů pro švédské letectvo. V roce 1962 koupila čtyři ze šesti dánských Meteorů TT.20. Letoun SE-DCF byl vybaven vlekacím zařízením ML G type.
