**No 2731**

# Tornado IDS/ECR

**EN**

The multi-role combat aircraft Tornado was jointly developed and built by a multinational collaboration of Italian, German and British companies. After forty years from the set up of the development, the Tornado is, still today, an aircraft with a significant operational capability. The Tornado is a twin-engine, variable sweep wing able to perform well as a low-level supersonic strike aircraft and able to "follow" the ground profile. The most successful commercial version was the ground attack variant IDS (Interdictor and strike). Later on, from the IDS version, the ECR (Electronic Combat and Reconnaissance), built as platform the electronic warfare and air defence suppression, has been derived.

**FR**

Le projet de Tornado est né de la collaboration entre l'Italie, l'Allemagne et le Royaume-Uni pour réaliser un avion de combat multirôle, avec des performances de vol élevées. Presque quarante ans après la configuration du projet, Tornado constitue encore aujourd'hui un véhicule équipé d'une capacité opérationnelle significative. Il a été réalisé avec la configuration des ailes à géométrie variable, pour mieux répondre à son rôle principal : avion de chasse bombardier supersonique à basse altitude, en mesure de « suivre » le profil du terrain. Et c'est justement la variante d'attaque au sol IDS (Interdictor and Strike) qui a permis le plus grand succès commercial de Tornado. La version ECR (Electronic Combat and Reconnaissance) dérive de la version IDS : elle est destinée à la guerre électronique et à la suppression des défenses aériennes.

**ES**

Il progetto del Tornado è nato dalla collaborazione di Italia, Germania e Regno Unito per la realizzazione di un aereo da combattimento multiruolo dalle alte prestazioni di volo. Dopo quasi quarant'anni dall'impostazione del progetto, il Tornado costituisce, ancora oggi, un velivolo dotato di una significativa capacità operativa. È stato realizzato con la configurazione delle ali a geometria variabile per meglio rispondere al suo ruolo principale: caccia bombardiere supersonico a bassa quota in grado di "seguire" il profilo del terreno. Ed è proprio la variante da attacco al suolo IDS (Interdictor and strike) che ha visto realizzare il maggior successo commerciale del Tornado. Dalla versione IDS è derivata la versione ECR (Electronic Combat and Reconnaissance) destinata alla guerra elettronica e alla soppressione delle difese aeree.

El proyecto del Tornado nació de la colaboración de Italia, Alemania y Reino Unido para la realización de un avión de combate multiusos con elevadas prestaciones de vuelo. Después de casi cuarenta años desde la realización del proyecto, el Tornado representa, todavía hoy, un avión dotado de una significativa capacidad operativa. Se ha realizado con la configuración de las alas de geometría variable para cumplir mejor con su papel principal: cazabombardero supersónico a baja cota capaz de "seguir" el perfil del terreno. Y es justo la variante de ataque a tierra IDS (Interdictor and Strike) que ha producido el mayor éxito comercial del Tornado. De la versión IDS deriva la versión ECR (Electronic Combat and Reconnaissance) destinada a la guerra electrónica y a la supresión de las defensas aéreas.

**DE**

Das Projekt Tornado ist aus der Zusammenarbeit von Italien, Deutschland und Großbritannien entstanden, um ein Mehrzweckkampfflugzeug mit hoher Flugleistung zu bauen. Beinahe 40 Jahre nach der Gründung seines Projekts ist der Tornado heute noch ein Flugzeug mit bedeutender operationeller Einsatzfähigkeit. Er wurde mit Schwenkflügeln ausgestattet, um seiner Hauptanforderung besser gerecht zu werden: Ein Überschalljagdbomber, der im Tiefstflug in der Lage ist, dem Geländeprofil zu "folgen". Der Jagdbomber Tornado IDS (Interdictor and strike) ist die Tornado-Version, die den größten kommerziellen Erfolg verwirklicht hat. Von der Version IDS wurde die Version ECR (Electronic Combat and Reconnaissance) abgeleitet, die zum Kampf mit elektronischen Waffen und zur Beseitigung der feindlichen Luftabwehr diente.

**NL**

Het project van de Tornado is ontstaan uit de samenwerking tussen Italië, Duitsland en het Verenigd Koninkrijk voor de bouw van een multifunctioneel gevechtsvliegtuig met uitstekende vliegprestaties. Bijna veertig jaar na de opzet van het project, vormt de Tornado nog altijd een vliegtuig met een belangrijke operationele capaciteit. Het toestel werd uitgevoerd in een configuratie met variabele geometrische vleugels om beter te voldoen aan zijn hoofdrol: supersonische bommenwerper op lage hoogte, in staat om het profiel van het terrein te "volgen". Het is net de IDS (Interdictor and Strike) variante voor grondaanval die het grootste commerciële succes van de Tornado realiseerde. Uit de IDS-versie werd de ECR-versie (Electronic Combat and Reconnaissance) afgeleid, bestemd voor de elektronische oorlog en voor luchtafweer.

**EN** **WARNING:** Model for adult collector age 14 and over

**IT** **ATTENZIONE:** Modello per collezionisti adulti di età superiore ai 14 anni

**FR** **ATTENTION:** Modèle pour modélistes adultes de 14 ans et plus.

**DE** **ACHTUNG:** Modellbausatz Für Modellbauer über 14 Jahre.

**NL** **WAARSCHWING:** Geschikt voor 14 jaar en ouder.

**ES** **ATENCION:** Modelo para modelistas mayores de 14 años.

#### **EN ATTENTION - Useful advice!**

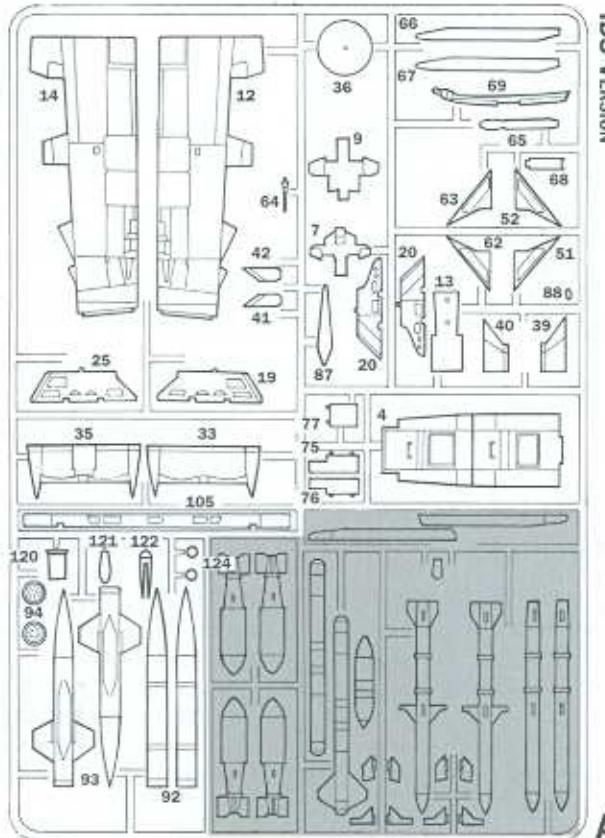

**Study the instructions carefully prior to assembly. Remove parts from frame with a sharp knife or a pair of scissor and trim away excess plastic. Do not pull up parts. Assemble the parts in numerical sequence. Use plastic cement only and use cement sparingly to avoid damaging the model. Black arrows indicate parts to be glued together. White arrows on which frame the parts must be assembled WITHOUT using cement. These letters (A - B - C...) indicate on which frame the parts will be found. Paint small parts before attaching them to frame. Remove paint where parts are to be cemented. Crossed out parts must not be used.**

[IT] ATTENZIONE - Consigli utili!

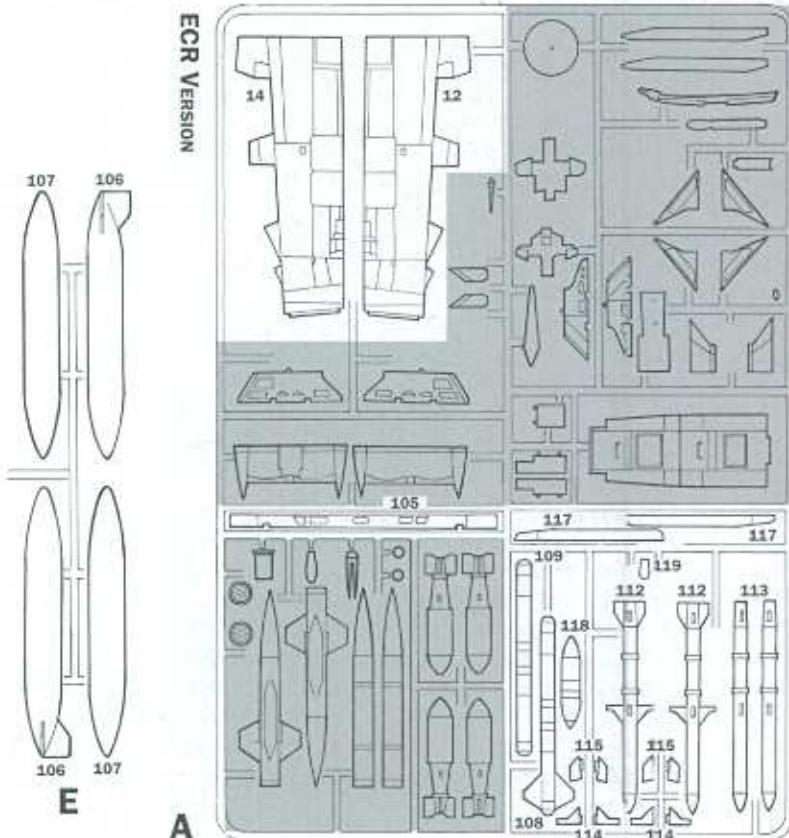

Prima di iniziare il montaggio studiare attentamente il disegno. Staccare con molta cura i pezzi dalla stampata, usando un taglia-basta oppure un paio di forbici e taglieri con una piccola lama o con carta vetro fine eventualmente staccare. Mentre staccate i pezzi con le mani. Montarli seguendo l'ordine della numerazione delle tavole. Eliminare dalle stampata il numero del pezzo appena montato facendogli sopra una croce. Le frecce nere indicano i pezzi da incollare, le frecce bianche indicano i pezzi da montare senza colla. Usare soltanto colla per petrolietto. Le lettere (A - B - C...) al lato dei numeri indicano la stampata che si trova il pezzo da montare. I pezzi sbarrati da una croce non sono da utilizzare.

**DE ACHTUNG** - Ein nützlicher Rat!

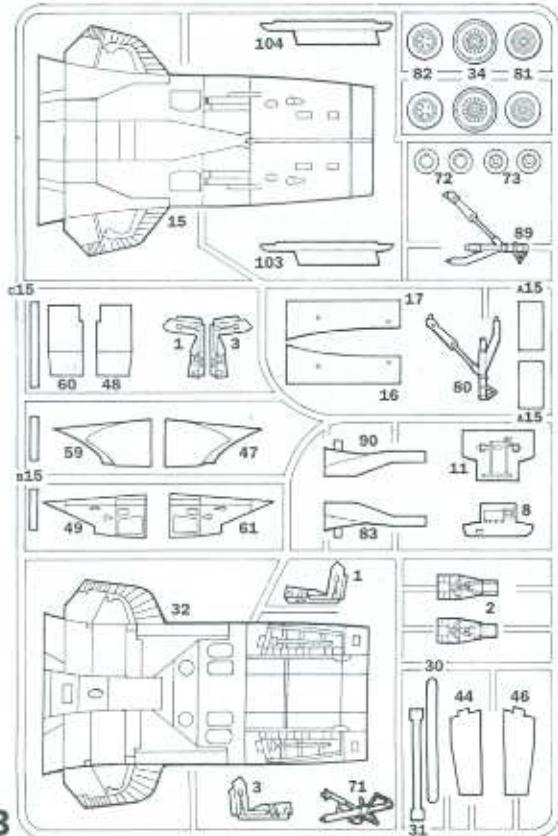

Vor der Montage die Zeichnung aufmerksam studieren. Die einzelnen Montageteile mit einem Messer oder einer Schere von Spritzung sorgfältig entfernen. Eventuelle Grate werden mit einer Klinge oder feinem Schmiergelpapier beseitigt. Keinesfalls die Montageteile mit den Händen entfernen. Bei der Montage der Tafelnummernfolge folgen Pfeile zeigen die zu klebende Teil der weisser Pfeile die ohne Leim zu montierenden Teile anzeigen. Bitte nur Plastikklebstoff währenden. Die Buchstaben (A - B - C ...) neben den Nummern zeigen auf welche Spritzung der zu montierende Teil zu fixen ist. Die mit einem Kreuz markierten Teile sind nicht zu verwenden.

Istruzioni per l'applicazione delle decalcomanie. Ritagliare le decalcomanie esceendo dal foglio, immergerle in un bicchiere d'acqua tiepida per circa 10°, metterle in posizione sul modello e farle svolazzare dalla carta; per una migliore aderenza comprimerle con una pressa calda.

Direzione per applying the decal: cut the required decal out of the sheet; dip it into a glass of warm water for about 10°; position the decal over the kit, letting them slide from the paper. For a better adhesion, press them by means of a warm cloth.

Färsättning av decaler: klipp ut den decal som ska användas och droppa den i ett glas vatten under en 10°. Sätt decalen på pärts på modellen och låt den sista gåta av pappret. För att den ska sitta ordentligt, tryck till med en varm duk.

Anweisungen für Abziehbilder-Anbringung: Die benötigten Abziehbilder vom Blatt abschneiden, in ein Glas mit Wasser für etwa 10° eintauchen, auf das Modell legen und dann vom Papier abnehmen. Um eine bessere Haftung zu erzielen, die Abziehbilder mit einem warmen Tuch andrücken.

Instruction pour l'application des décalcomanies: couper les décalcomanies hors et les plonger environ 10° dans un peu d'eau tiède. Les placer sur le modèle en les faisant glisser de leur feuille et presser avec un morceau de chiffon pour éliminer les bulles d'air.

Instrucciones para la aplicación de las calcomanías: cortar las requeridas, sumergirlas en un recipiente de agua limpia durante 10°, colocar las calcomanías sobre el modelo, haciendo deslizar sobre el papel. Para una mejor adherencia, precomprimir con un trapo tibio.

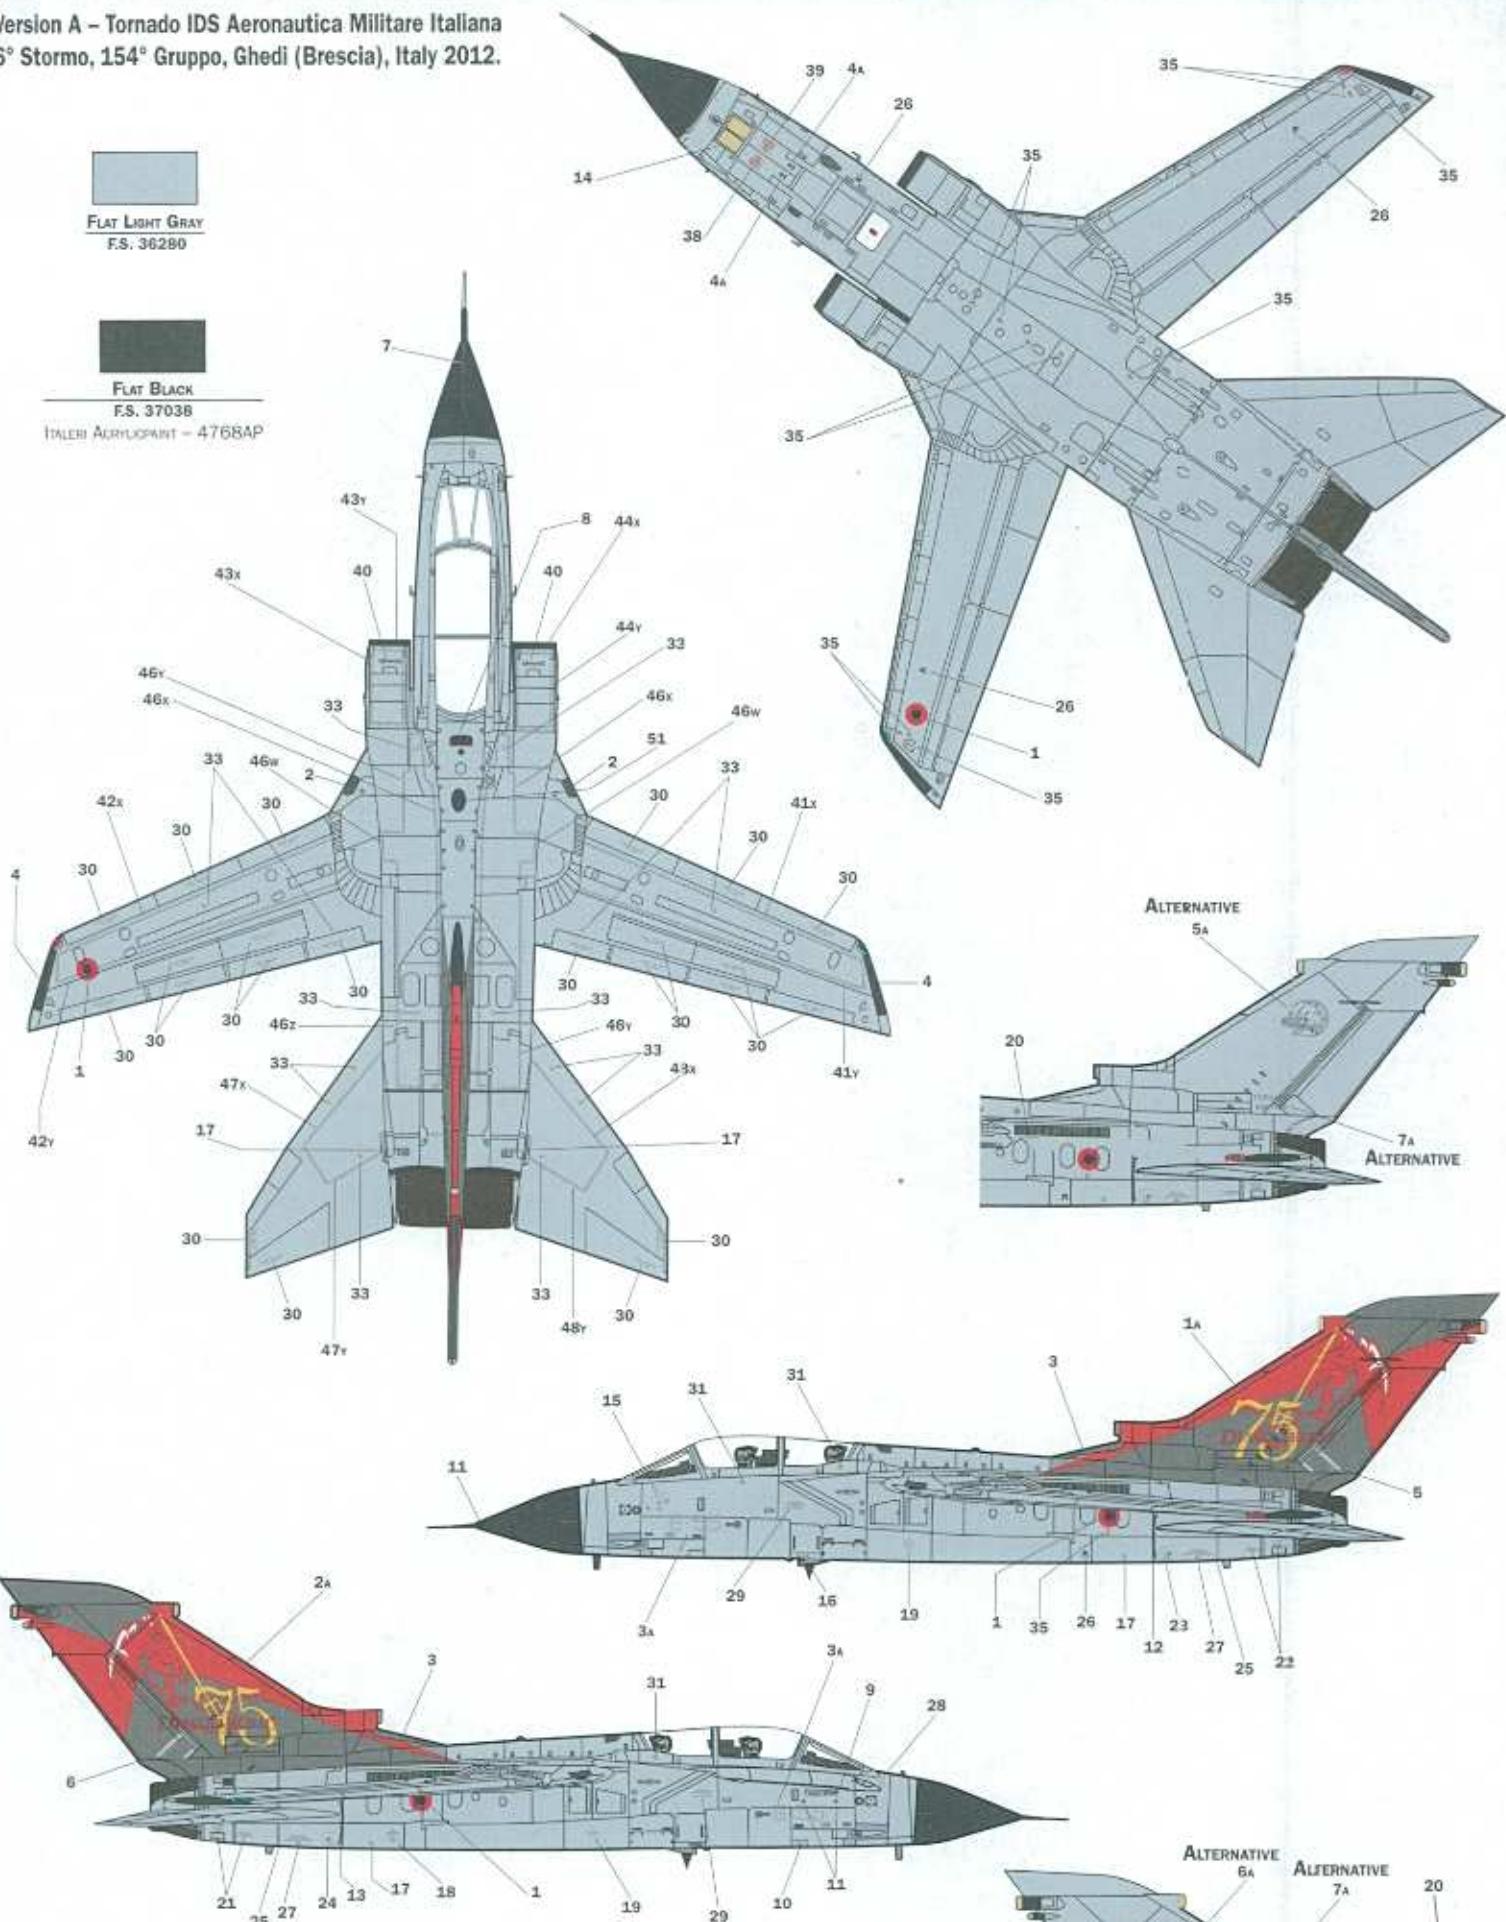

Travers: klop het benodigde deel uit, dampf al ca. 10° onder water, duif het transfer tegen het model en schuf het vanaf het papier op zijn plaats. Met een schoon doekje aandrukken.

ヨコー転写法：白紙カット。それを水のマグカップに割ります。温め過ぎないで下さい。それを干します。マグカップから丁寧に取り出します。紙面は残さないで下さい。やわらかく名前でマークを押して、丁寧な力を取って下さい。マーク面には、せわしくタッチしないで下さい。

Инструкции по применению декалей: отрежьте нужную часть декалей от общего листа. Поместите ее на 10 минут в чистую воду, затем аккуратно извлеките из воды, оставив пленку. Для лучшего прилипания нажмите на декалей рукой.
