Modeler's Notes

- A-7D decals are sized for the Hasegawa kit. The A-7K decals are sized for the Hobby Boss A-7K. Stencil decals are supplied on this decal sheet. Refer to kit stencil diagram for stencil placement and paint patterns. Please note, however, that the paint diagrams will vary from jet to jet, as each aircraft was painted by hand. The left/right profiles on these instructions were drawn while studying photographs of the actual aircraft. Paint your models accordingly, making the top and bottoms match the side drawings shown here. A-7Ks use the kit's white refueling slipway decal.
- All aircraft have the last three digits of their serial number repeated on the forward edge of the nose landing gear doors, as shown below. In addition, the two Pittsburgh SLUFs have their last three digits on the inside of the main landing gear doors.
