Notes on Specific Aircraft

All Aircraft

- Unfortunately, we could not identify an upper surface camouflage pattern for any of these aircraft. A typical scheme is depicted on the back page of the instructions.

Fw 190F-8/R1, Green 2

- Both yellow and green code letters are documented in this unit. Since the code letter in the black & white photo of this aircraft does not match the yellow tail, we believe the code letter was green. However, it might have been yellow, so we've provided that decal as well.
- Color Scheme: RLM 83, 75 & 76 with possible RLM 02 mottles along the side.
- REFERENCES: *Fw 190A/FIG Monografie #17*, 1995.

Fw 190A-8, Red 11

- This aircraft has been portrayed in a dark green/brown camouflage scheme in other references. We do not believe this to be accurate. A variation from a standard factory pattern may be to blame here, giving a false impression that the aircraft had been repainted in the field (JG 54 often used captured Russian paints). The tonal differences between the two upper surface colors in our photo better match 74/75 than the brown/ green scheme found on some other aircraft in this unit.
- This aircraft features the mid-blue color worn by JG 54. Per color photos, this is NOT RLM 24, but a unit mixed lighter color (no FS 595 match available, since it varied from a washed out mix of, presumably, RLM 24 and white, to a rather electric light blue).
- The forward cowl ring may be Red instead of Black. Without better photos of this aircraft we cannot be sure.
- REFERENCES: *Aircraft of the Luftwaffe Fighter Aces, Vol. 2*, by Bernd Barbas. Schiffer, 1996

Fw 190A-8, Black 4 Bar

- Color Scheme: RLM 83, 75 & 76 with possible RLM 02 mottles along the side.
- REFERENCES: *Aircraft of the Luftwaffe Fighter Aces, Vol. 2*, by Bernd Barbas. Schiffer, 1996

Fw 190D-9, Black Chevron Bar Bar

- Color Scheme: RLM 83, 75 & 76. The cowl has a light color (slightly darker than RLM 76, as it shows up against the 76) that we've interpreted to be a neutral gray color (possibly a primer).
- Please note several items regarding the fuselage RV stripes. First, the center white stripe is WIDER than either of the black stripes. Second, the forward black stripe gets wider as it goes down. This stripe meets the center white stripe just forward of the panel line, NOT on it. Third, the rear black stripe begins on the forward edge of the circular panel found on the starboard side of the fuselage.
