Decal Placement Instructions

COCKPIT
Black interior, gray instrument panel,
black seat, green seat cushions,
red head rest.
Inside of canopy framing; black.

16. Note: This is an exhaust port for the more powerful Canadair version of the T-33. Advanced modelers may prefer to create a hole in the kit instead of using the decal.

Intake Decal
If using this decal, fill recess in kit if it has this detail. Strongly recommended since none of the kits have accurate placement of this item.

Splitter plate located in intake is underside gray on top and bottom with black sprayed in the middle.

NOSE PAINTING DEMARCATION LINE PATTERN
Photocopy, cut out and place on model to mark edge of colours. Flip over to do opposite side.

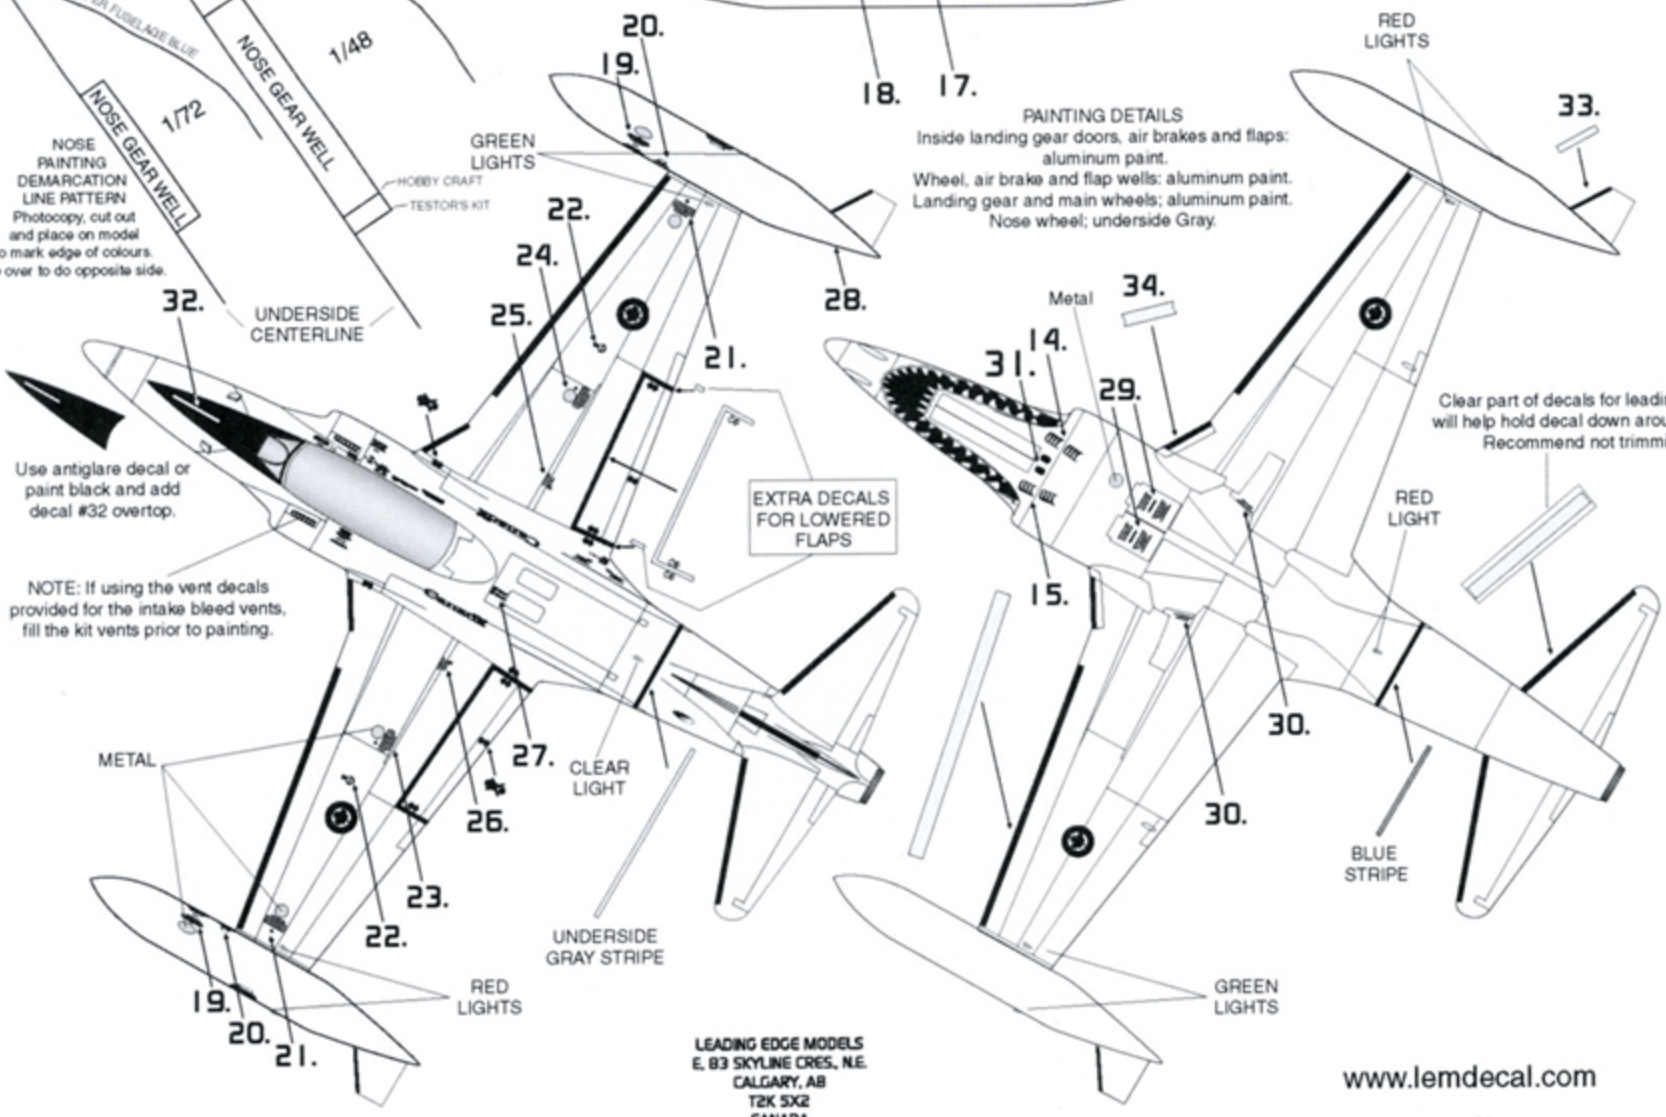

Use antiglare decal or paint black and add decal #32 overtop.

NOTE: If using the vent decals provided for the intake bleed vents, fill the kit vents prior to painting.

PAINTING DETAILS
Inside landing gear doors, air brakes and flaps: aluminum paint.
Wheel, air brake and flap wells: aluminum paint.
Landing gear and main wheels; aluminum paint.
Nose wheel; underside Gray.

EXTRA DECALS FOR LOWERED FLAPS

Clear part of decals for leading edges will help hold decal down around curve. Recommend not trimming.
