Messerschmitt Bf 109 G-4s JG 27, JG 52 and JG 53

From the modeler's perspective, the G-4 version of the Bf 109 series is a kind of transition aircraft between the G-2 and the G-6 types. The first G-4s were delivered to fighter units in late 1942. Like other variants, there was some cross over into the new types earlier manufactured aircraft. Here are the G-4 characteristics:

* Antenna lead-in wire moved to rear fuselage.

* 660mm X 160mm size tires mounted on the spiked main wheel requiring the tear drop shape bumps on the upper wing to accommodate the larger wheels. Some early G-4s still had the small 650 mm X 150 mm main wheels.

* 350 mm X 135 mm tail wheels same as G-6s.

* The axle of the main wheel was changed so the wheel would now be at a more vertical angle.

For accurate color reference we recommend the Luftwaffe Color Chart published by Eagle Editions Ltd. featuring paint chips prepared by Warnecke and Böhm available from your local hobby shop or Eagle Editions Ltd.

Resin EagleParts for the Bf 109:

EP#20-32 Corrected spinner for the Hasegawa "G" series

EP#21-32 Corrected drop tank for the Hasegawa "G" series

EP#22-32 Battery Box for G-6 and G-14

EP#23-32 Corrected ETC rack for drop tanks

"White 25"	Bf 109 G-4	1./JG 27	Early 1944	Fels, Northern Austria
-------------------	-------------------	-----------------	-------------------	-------------------------------
