# EagleCals #153

# Ju 88 A-4

Note there are two types of rudders fitted to this aircraft. An early rudder without the horn and a later one, with the horn. Most, if not all kits, represent the latter leaving the modelers with a choice, depending upon the scheme selected. Those insisting on accuracy can modify their kits accordingly. Others may simply choose to ignore the issue.

If necessary to convert to the earlier style rudder from the model, without the assistance of aftermarket products, remove the horn from the rudder and add it to the vertical surface. Fill, sand and scribe as necessary for a proper finish.

By paying close attention to the profiles printed herein, it is possible to determine the appropriate rudder fitted to the selected model desired.
