

This McDonnell Douglas MD-80 Detail Sheet allows the modeler to apply stenciling and wing detailing to any version of the DC-9 Super 80 series of aircraft. Please keep in mind that stenciling data vary from airline to airline and some small details may have been inadvertently left off while extra ones may go unused. Due to the many different colors and variations used by different airlines, it is almost impossible to cover them all and adequately provide information to their placement and use. However the general data provided are more than adequately and will allow you to super detail your model. Nonetheless, it is vital that as much information as possible be collected on the particular aircraft you are modeling. A great resource on the web is www.airliners.net. Apply stenciling and wing-spar panels as shown. For wings and engines repeat for the other side. Some parts will not be used. Extra pieces are provided incase they are needed and all will not be used.
