 Gunze Sangyo H306  
 Xtracrylics XA1133

**QF-16**

*This is a "what if" scheme for the soon to be developed QF-16 Air Superiority Target. A Block 15 ADF and a Block 25 aircraft are represented on this decal sheet.*

*Both the USAF and USN have had full-scale aerial target programs in the past with the USN program being mothballed back in 2004. The USAF currently has a target program and flies three different variants of the F-4; the QF-4E, QF-4G and the QRF-4C. All of these aircraft are based at Tyndall and Holloman AFB and fly in support of Weapons System Evaluation Program (WSEP) testing.*

*Operational units in the USAF, USN and NATO test both weapons systems and tactics against these target drones during Combat Archer exercises. Testing of US technology weapons against "threat representative targets" is mandated by Title X law in the US. As long as the US defense industry develops air-to-air weaponry, there will be a full-scale target drone to shoot down with said weapon.*

*The QF-16 will be the next generation target drone and will replace the QF-4 in approximately 2011-2012. This new aircraft will continue a legacy that started with the QF-86 and continued on with the QF-100, QF-106 and the current QF-4.*

*Twobobs' goal is to provide you with the most thoroughly researched decals that money can buy. We go beyond using traditional reference resources and many times speak with the actual aircrews and maintainers of our subject matter. Being modelers ourselves, we understand that there is no substitute for this painstaking research and we are proud to offer, what we feel, are the best decals on the market. If you have any subject matter that you feel should be the next Twobobs creation, let us know. We'll be happy to listen to any and all customer input.*
