US Navy bombs can be differentiated from their USAF equivalents in two ways. In order to extend "cook off" times in the event of fire aboard ship, live US Navy bombs have an ablative, rough-textured coating. This is signified by 2 yellow stripes, on the MK 80 series of bombs versus a single yellow stripe for USAF versions. The BLU series of bombs carry 3 yellow stripes indicating a PRED-100 explosive filter which provides an additional measure of fire protection.
