

AERO AB-101 92262

1/72
SCALE

Čs. bombardér Aero Ab-101 vznikl vývojem z A-101, především montáží motoru Praga HS 12Ydrs, měl jinou směrovkou a větší křídélkana křídle. Zlepšila se stoupavost a dostup, rychlost se nezlepšila. Zvětšila se nosnost pum. Letoun byl schopný operovat i na polních letištích. Sloužily u Leteckých pluků 5 a 6. Ke konci roku bylo ve službě 60 kusů, které po březnu 1939 připadly Luftwaffe. Ta je používala k výcviku asi do roku 1940. Jeden stroj který zůstal na Slovensku byl použit k úletu slovenských letců do Polska v červnu 1939. Zde byl také ukořistěn v září 1939 německou armádou.
