2" diameter.
SMAU markings face outward
on both tanks

84-337 Pilot Seat
32-437 Gunner's Seat
Armour Plating

ACAT/FRP

RAAF's Dryden Flight Research Center is working with the U.S. Air Force Research Laboratory in the Fighter Risk Reduction Project to develop critical avionics technologies for ACAT/FRP aircraft that would reduce the risk of ground and in-flight accidents.

The Fighter Risk Reduction Project is the first flight research effort being conducted under the Automatic Collision Avoidance Technology program of the Air Force Research Laboratory at Wright-Patterson Air Force Base in Dayton, Ohio. Actual test flights of the system are scheduled to begin in the fall of 2009.

All A/C use the silver
style TAI20 wing
launch rails

Torbob's goal is to provide you with the most thoroughly researched decals that money can buy. We go beyond using traditional reference resources and many times speak with the actual aircrews and maintainers of our subject matter.

Being modelers ourselves, we understand that there is no substitute for this painstaking research and we are proud to offer, what we feel, are the best decals on the market. If you have any subject matter that you feel should be the next Torbob's creation, let us know. We'll be happy to listen to any and all customer input.
