In 1959 the Swiss company Pilatus Aircraft built a single-engined light utility aircraft, the PC-6 Porter, with a Lycoming GSO-480 340 h.p. engine. The aircraft was built in relatively small quantities (72 units), but its construction, despite its basic nature, had great potential for a variety of tasks. Two years later there appeared the PC-6A Turbo Porter with a 520 h.p. Turbomeca Astazou engine which was better than its predecessor in all major performance areas. Later, another engine was installed in the aircraft - the Pratt & Whitney Canada PT6A. Now there were individual pilot doors on both sides of the fuselage in the PC-6B version, in addition to sliding side doors, which facilitate departure from the three doors in each cabin. As in the PC-6A, the nose elongated a characteristic straight and mergingency. In the case of emergency, evacuation of the cockpit in the air is carried out by opening the front door. The PC-6B has a more powerful engine than the PC-6A, but it is heavier and has a larger nose. The aircraft has a maximum take-off weight of 2,600 kg and a range of 1,500 km. The PC-6B has a maximum speed of 260 km/h at sea level, a range of 1,500 km and a service ceiling of 4,500 m. The aircraft is used for various purposes, including medical transport, search and rescue, and agricultural work. It is also used for training and as a transport aircraft. **ATTENTION - Ein Nutzlicher Rat!**  
Lesen Sie die Anweisungen gezielt vor der Montage des Zierleins. Von der Montage bis zur finalen Montage sollten Sie die Anweisungen nicht aus den Händen legen.

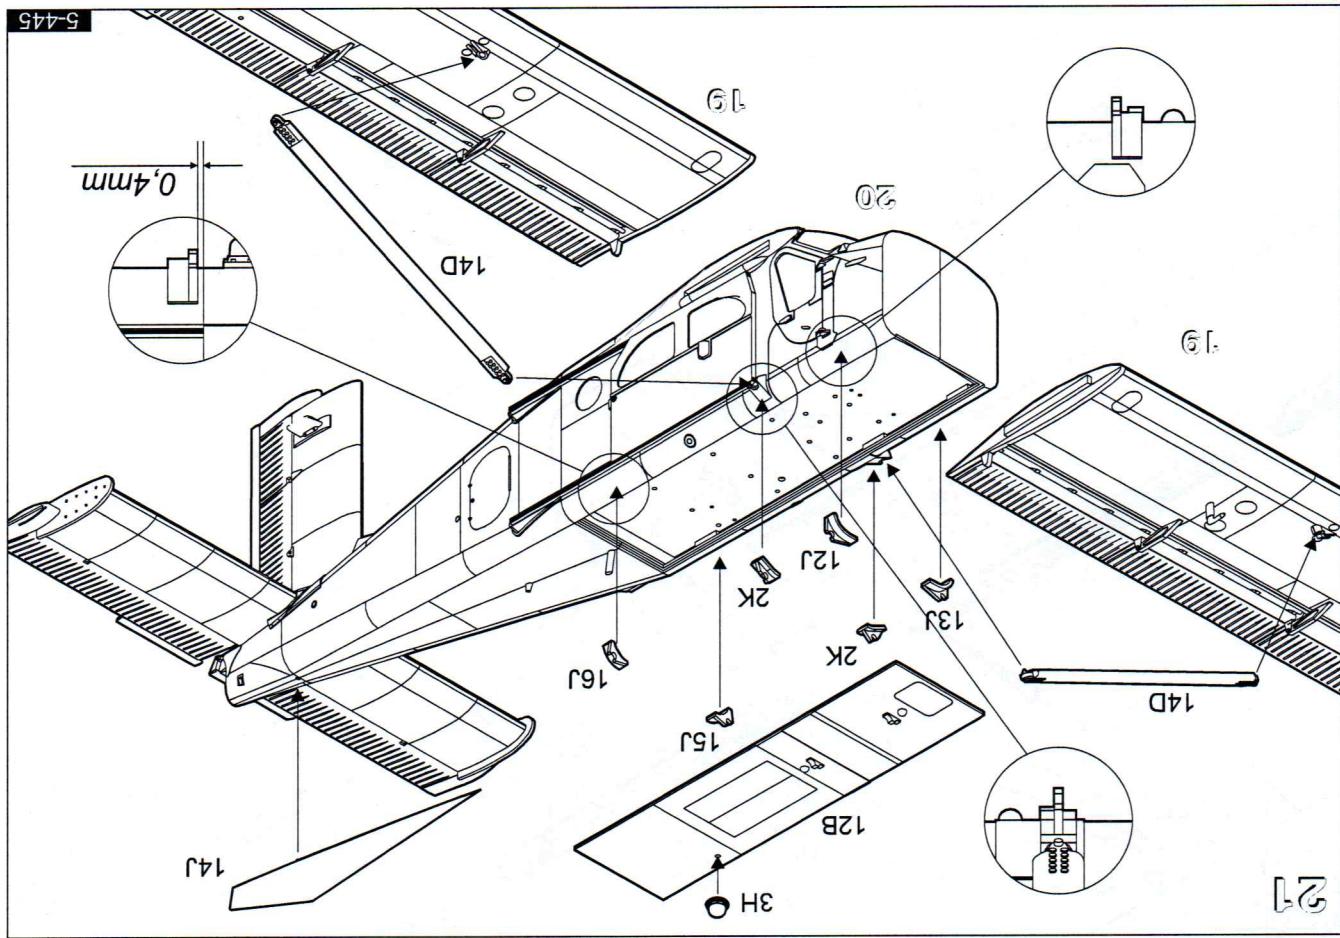

**Комплектність:**

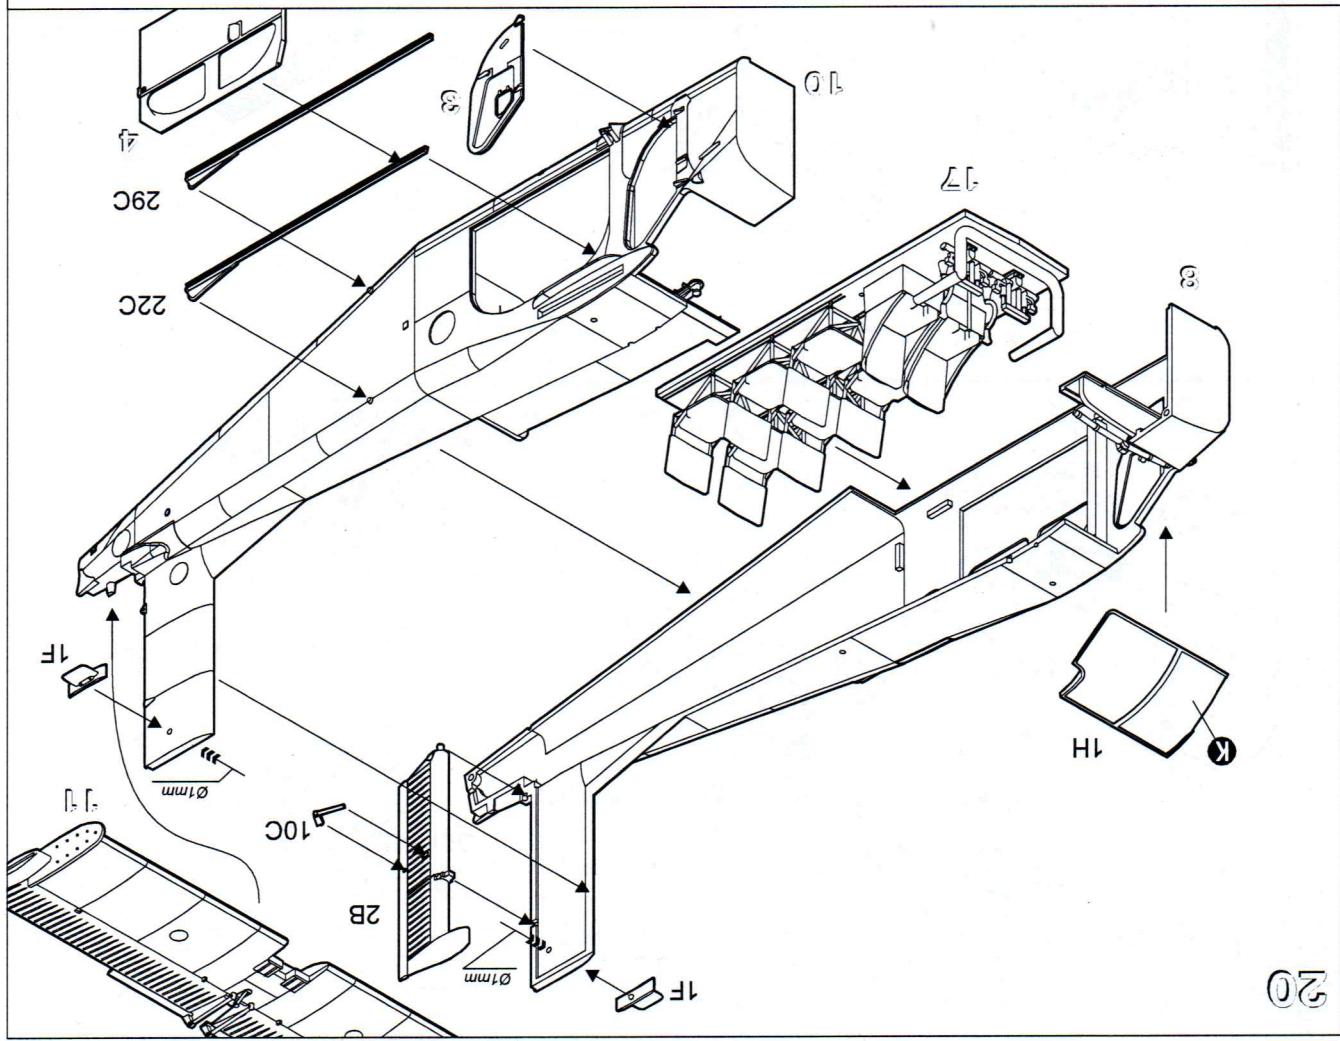

1. Рамки з деталями - 9 шт.
2. Інструкція - 1 прим.
3. Декапі - 2 прим.
4. Коробка - 1 шт.
